ICON Investor Update

Q1 2026

Greetings ICON Investors,

This year continues to feel like a breakthrough year for ICON on all fronts. Our headline objectives this year are:

1. $100M of profitable revenue,
2. Launch Titan and the technology business, and
3. Establish a dedicated government business.

I am pleased to report that we are tracking on or ahead of plan on all of these objectives:

Objective 1: $100m of profitable revenue

After achieving our first gross margin positive year in 2025, it was time to focus on growth again. The senior leadership team set a goal of $100m of gross margin positive revenue in 2026, and then built a financial plan around that goal. We beat revenue in Q1 (more details in the Financials section below) and are officially raising our revenue guidance for the year to $103-109m, roughly 4x growth over FY 2025, with almost 100% of that revenue already contracted and underway.

Objective 2: Launch Titan and the technology business

On March 11 we hosted 120+ builders and developers at our first annual Converge conference, officially launching Titan and our technology business (“ICON Tech”). Titan is a step-function improvement over our legacy Vulcan system, with lower costs, faster speeds, and the ability to print two-story structures. With a list price of $899k, Titan gives small-to-medium sized builders cost savings, time savings, and a higher-performance, differentiated product, allowing them to compete with the largest builders. From our perspective, Titan brings us a high margin, SAAS-like recurring revenue business model, with stacking cohorts of Titan owners continuing to purchase ICON’s proprietary materials, software and architecture as they build.

Thirty-two builders have already reserved a total of 61 Titans - an average of 1.9 Titans per customer - and we anticipate delivering the first Titans to their owners in Mar/Apr 2027. More immediately, we now have three Titans at HQ going through final testing and calibration exercises in preparation for our first “for-revenue” Titan prints this summer.

Objective 3: Establish a dedicated government business

The military has the same problems with construction we see in the residential and commercial sectors: projects cost too much and take too long. The DOW also recognizes that substandard housing hurts our troop readiness. Dale Marks, Assistant Secretary of Defense for Energy, Installations and Environment, testified before Congress on March 4, 2026 that **"our installations are weapons systems — just like our ships, tanks and planes"**[1] positioning military infrastructure as active warfighting components and a means of maintaining readiness.

After 6 years of progressive R&D and pilot-scale projects with the military and the Army Corp of Engineers, the DOW has emerged as our largest customer this year, representing just over 80% of our total 2026 revenue. Our marquee project in 2026 is building 10 training barracks at Fort

[1] Dale Marks, Assistant Secretary of Defense for Energy, Installations and Environment, testimony before Congress, March 4, 2026.

Bliss for the US Army **in 6 months and at half the cost of their next best alternative**. The project is on pace to complete on time and on budget, and we have absolutely delighted the Army with our performance.

Fort Bliss has already led to a $201m contract award at Fort Polk, revenues which will be recognized in 2027-2029, and now the floodgates are starting to open. To scale this team and manage these relationships, former Texas Congressman Will Hurd joined ICON in Q1 as the Division President of ICON Prime, our newest division that tailors elements of the ICON Build and ICON Tech products to the specific needs of our government customers (DOW, NASA, IC, etc.). Will is an amazing addition to the team and is already having a measurable impact on the business. [More about Will joining ICON here](#).

Financials

In Q1 2026 ICON earned $22.2m in revenue, representing 213% growth YoY and 99% growth QoQ. Revenue was 41% better than our original $15.7m plan, driven by Fort Bliss ramping faster than expected and some R&D contract milestone acceleration. We are raising FY 2026 revenue guidance from $101m to a range of $103–$109m, roughly 4x growth over FY 2025, supported by a strong contracted project backlog.

Income Statement *($000s)*	**2025 Q1**	**2025 Q2**	**2025 Q3**	**2025 Q4**	**2026 Q1**	**Growth QoQ**	**Growth YoY**

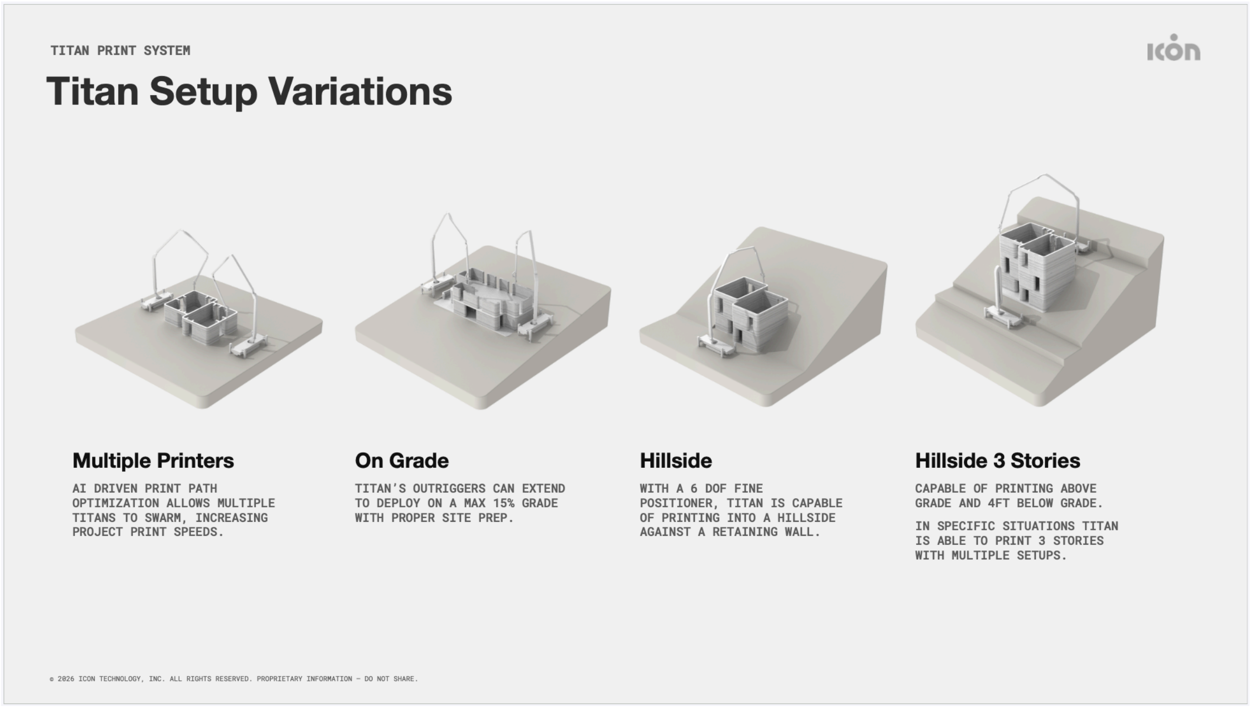
**Adjusted EBITDA excludes depreciation, amortization, stock-based compensation, interest income, other income/expense, and gain/loss on disposal of PPE and leases*

We ended Q1 2026 with $67.7m of cash in the bank and 259 headcount. While our financial plan gives us cash into Q1 2027, we feel compelled to fundraise now and capitalize on the inflection point momentum of the business. We are running a focused Series D financing process and have conversations underway with a strong list of potential investment partners.

My favorite recent image

Titan is not just a new printer, it is an entirely new platform that we can build around (no pun intended!) for years to come. This image from our design team really drove the flexibility of this new platform home for me.



How you can help

We are hiring for several roles across finance, software, engineering, marketing, manufacturing, field operations, data intelligence and more. Hot roles we are eagerly looking to fill asap include a Technical Director of Off-planet Systems and Space Robotics, multiple Software Engineers, and a Mechanical Engineering Manager. If you have any referrals or can share any recent ICON social media posts to your networks calling out that ICON is hiring, please link to our careers page. We greatly appreciate it.

ICON continues to be in the headlines across our Tech and (new) Prime business divisions. Please share the latest high-profile media coverage with your networks as well as our latest video drops.

Titan Product Video (sound up!)

On my mind

Overall it feels like we've hit the inflection point we've all been working toward for several years, and the team is as focused as we've ever felt it. The primary area of risk right now is Titan product and technical development. Titan engineering is progressing, but we need to cross some key milestones in the next few months to be ready to print for revenue later in the summer. This is our biggest area of focus over the next 90 days.

In the rest of the organization, a meaningful part of our energy and focus is already beginning to shift into 2027. Business development teams are focused on the 2027 pipelines; product development and operations are preparing to deliver the first Titans to customers in early 2027; and we have begun a slow-rolling restructuring of the organization to reflect our three primary go-forward business units: Build, Tech, and Prime.

We plan to start sending quarterly investor updates through Carta within 45 days after the end of each quarter. In the meantime, please don't hesitate to reach out if you have questions.

Thank you for your continued support,

Jason Portnoy

President

ICON Technology, Inc.
